

## **Deskside Holoprinter®**

The DHL Deskside Holoprinter® is the world's first commercial available office printer for 3-D pictures, called holograms. Engineers can now visualize their 3-D computer designs in their own office by holography. This is a breakthrough in hardcopy of your data. Molecular scientists can visualize 3-D complex molecule structures giving better insight into these molecules. Air flow around cars or airplanes from windtunnel measurement can be visualized in 3-D. Medical data from NMR scans give a perfect 3-D visualization.
